

Instructions for Sending Samples to CWC Labs

ACCEPTABLE items include foods, beverages, water, dietary supplements, raw food materials, environmental samples such as grass or leaves, etc.

PROHIBITED items include blood, chemical solvents, explosive chemicals, recreational drugs, microbiologicals or any substance which is highly toxic, explosive or prohibited by law (such as THC from hemp).

For Solids:

- Take the sample without touching it with your fingers or anything that might contaminate it. Use a disposable plastic spoon, for example.
- Place the sample in a plastic vial (such as a 50 mL centrifuge tube) or a sealed plastic bag (such as a Ziplock bag).
- Send us approximately 10–20 grams total, or 3–4 tablespoons if you don't know how many grams it weighs.
- Be sure to label the vial or plastic bag with your sample ID. You can choose any sample ID you wish, such as "123456" or "ABC123" or any unique combination of characters. Only use this ID one time. Never repeat the same sample number, even across different lots submitted for testing.

Solid sample in plastic vial.

For Liquids:

- Use a sealable centrifuge vial (such as a 50 mL vial) that can be sealed.
- Send us a full vial (50 mL).
- Seal the lid onto the vial using very durable tape. Otherwise, the sample will leak during shipping. Place the vial inside a Ziplock bag to further protect it from leakage.
- Be sure to label the vial with your sample ID. You can choose any sample ID you wish, such as "123456" or "ABC123" or any unique combination of characters. Only use this ID one time. Never repeat the same sample number, even across different lots submitted for testing.
